

GROWTH

Year 6 have been researching the growth of different objects and lives we can find across the world, from technology to plants.

They have been discussing how we as a human race can work towards a more sustainable future, and made posters to represent what they have learned.

These posters will be entered into a national competition with the opportunity to win some exciting prizes!

We hope you enjoy the hard work the children of Year 6 have completed for their Science Week.

The Future...

Flying cars
Many people think that in the future we will have flying cars. And we have to have flying cars.

Movies Are Coming Up
More if Earth ever ends we are all hoping to go to space.

TECHNOLOGY

good sometimes and bad

Technology has helped us to walk, watch, videos do so many things but they see how old telephones to send over your each to write.

from old telephones to brand new apple phones and other technology facts

How technology used with is a form of skills, method and production. But technology will not always help you.

Moto
Technology is not always going to help you in life. only working as a team

GROW

THE GROWTH OF TECHNOLOGY

NOKIA
Phones were invented on the 7th of March 1876 and have rapidly grown in cost, style and size.

IPHONE 7
The first iPhone was introduced on September 21st 2007.

IPHONE 13
This year the iPhone 13 pro max came out and started to appreciate for \$1199.

IPOD
People can customize with phone cases.

Now a days their phones

FUTURE!

How Will Life be Like in the future?

How do you think that we will be like? I think that we are going to be run by electricity or power. I think this because the cars are slowly changing to electric. It maybe hovering cars.

A phone in the older days had no camera or photos.

After that phone was made, the camera was made. You could make take pictures on your phone.

Now we use these phones that you can take pictures on and send messages.

We also use apps which are similar to a phone.

You use these phones that you can't sleep any thing on it.

GROWTH OF A PLANT!

Did you know that everyone and everything can grow?

The growth of a plant may take days or years just like a human. Everyone can grow some people grow by height and some people grow by being more confident.

Here is a diagram of the life cycle of a plant and you can see how a plant grows over time. So first a plant starts of as a seed with roots will start to poke out of the soil and day by day the stem grows taller and the stem grows some leaves. So eventually the soil gets more leaves. Have fun growing!
